SpaceX (the world's biggest rocket) launch cancelled

Don't miss the Lyrids meteor shower

Dinosaur teeth discovered by AI could be oldest found in UK

# Science Word of the Week

## **HARDWARE and SOFTWARE**

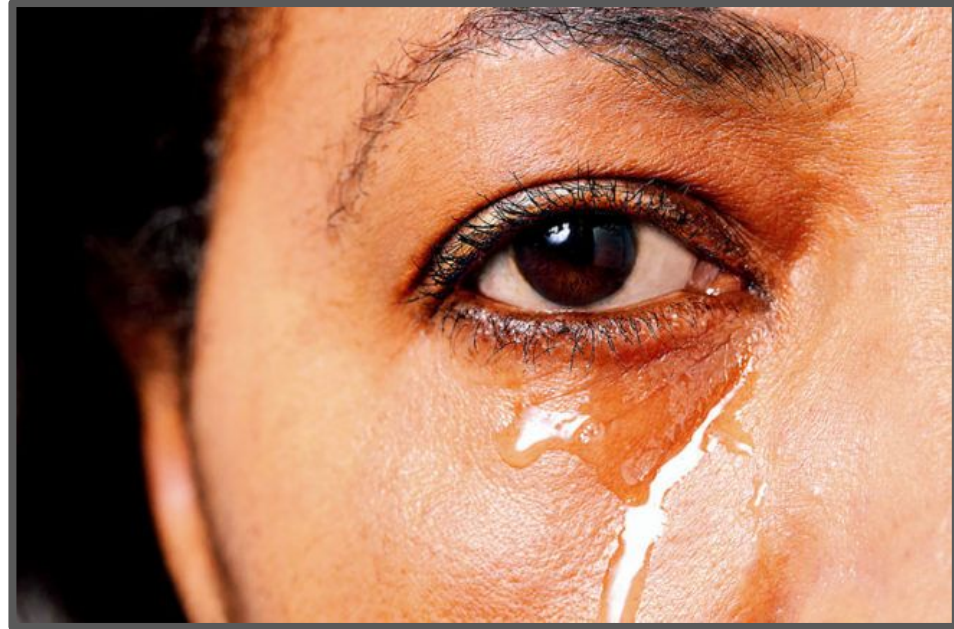

Hardware and software are two aspects of computing technology.

Hardware refers to all the physical pieces of a computing device e.g a screen or a keyboard. Basically, if you can touch it, it's hardware.

Software refers to all the computer programs, or code, running on the machine. That code tells the hardware what to do and how to do it. Examples of software include phone apps, video games and web browsers. You can't physically hold these things, but hardware can't do useful tasks without them.

# The Big Question...

Click the picture above for the answer to this week's Big Question.

Do you have a science news story you want to share?

How about a lovely piece of science work you're proud of?

Perhaps an extraordinary experiment or piece of research you've done at home?

What about a wonderful science word for our Word of the Week?

Let your teacher know or come and see Mr. Humphrey
